

C1

(Cynodon dactylon)

WHY CHOOSE C1

- **Good wear tolerance**
- **Good tolerance of cold temperatures**
- **Dark green colour**
- **Good herbicide resistance**

Cold Tolerant

Tolerant of cold temperatures

High Traffic Tolerant

Extremely hard wearing

Required Sunlight

Min. 7 hours of direct sun daily

ABOUT THIS TURF

C1 is an improved variety of Common Green Couch that has been developed to recover rapidly from damage and is extremely hard wearing. It is dark green in colour, produces minimal seed head, and creates an attractive lawn. C1 will perform well with minimal maintenance but with a little extra care, the fine leaf, deep green appearance of this variety is outstanding.

The blades are a deep green colour and are short, usually 2–5 cm long. It has a deep root system; in drought situations with penetrable soil, the root system can grow to over 2 metres deep. C1 doesn't propagate through seed but does recover quickly through stolons and Rhizomes in the ground.

Optimum growth is between 24 and 37 °C. C1 couch is still being used on many major sporting grounds around South East Queensland because of its outstanding ability to be oversewed with Rye during the colder months of the year.

'C1' is ideal for racetracks, sports fields, home lawns and parks.

We are growing.
