

QUEENSLAND BLUE COUCH (Digitaria didactyla)

WHY CHOOSE BLUE COUCH

- Ideally suited to South East Queensland climate and conditions
- A dedicated sun lover requiring 6 to 7 hours sunlight for optimum performance
- Gorgeous blue/green colour
- Lovely, lush soft feel underfoot. This is a lawn you will want to walk barefoot on!
- Requires LESS mowing than green couch varieties
- Does not scalp (straw like appearance) after mowing
- Wears well in most front and backyard situations

Drought Tolerant

Adapts to the harsh environment

Weed Tolerant

Resistant to disease and weed invasion

Required Sunlight

Min. 6 hours of direct sun daily

We are growing.

ABOUT THIS TURF

Queensland Blue Couch is characterised by its blue/green hue and silky softness which makes it a popular choice for many South East Queensland homeowners. It grows naturally throughout the region which ensures it is ideally suitable to our sub tropical climate. It has a similar appearance as normal couch, but with a wider leaf blade which tapers into a pointy tip. It produces minimal seed heads compared to standard couch varieties meaning an easier to mow lawn for the home owner or commercial maintenance person.

Queensland Blue is known for its low growing lush coverage, which not only gives the home owner a strong, weed resistant lawn but also provides a nice soft feel. It also demonstrates good drought tolerance once its roots have grown and bounces back brilliantly with a light watering.

If you are looking for a prestige lawn that can be manicured into a bowling green, then Queensland Blue Couch is the turf grass for you. Its open structure coupled with a soft blue/green leaf makes this grass a stand out!
