

SHADETUFF

(Zoysia Matrella)

WHY CHOOSE SHADETUFF

- Vibrant green colour, even in Winter
- Ideal for remediation of salt effected areas
- High shade tolerance and cold tolerance
- Low maintenance
- Requires little fertilizer
- Resistant to invasive weeds
- Prestige lawn suitable for home, high impact public areas and golf clubs
- Drought tolerant

Drought Tolerant

Grows well with minimal watering

High Traffic Tolerant

Tough and hard wearing

Required Sunlight

Min. 3 hours of direct sun per day

ABOUT THIS TURF

Shadetuff is the right choice for renovators and new home builders looking for a backyard that has that 'wow factor' and will make the neighbours green with envy!.

Shadetuff zoysia is a medium- to fine-textured turf grass variety ideally suitable for use in home lawns, domestic, commercial, recreational and environmentally sensitive areas. Shadetuff is vibrant green in colour and handles wear, salt and very shady conditions. It requires less attention than other common warm-season turf grasses like blue and green couch. Shadetuff performs well from full sun through to regularly shaded areas (15% more shade tolerant than buffalo varieties) and can take over moist, shaded parts of the yard, forming a dense dark-green sward. This new variety has been bred from Japan which will ensure your lawn is green with even the toughest winter temperatures.

Zoysia grasses offer a new option in low-maintenance lawns for Australian home owners and are valued for their ability to form a lush, hard-wearing, high-quality lawn. Their slow growth reduces the need for mowing and their nitrogen requirement is lower than that of green couch.
